

ABSTRACT OF THE DISCLOSURE

An apparatus for electronic data storage is disclosed. The apparatus includes any number of discrete data storage devices mounted on a card which readily can be inserted into and removed from an associated piece of electronic equipment, such as a computer. One or
5 more controllers mounted on the card or remotely control the transfer of data to and from each discrete data storage device. Multiple cards containing one or more discrete data storage devices can be arrayed for use in connection with any number of associated electronic apparatus.
